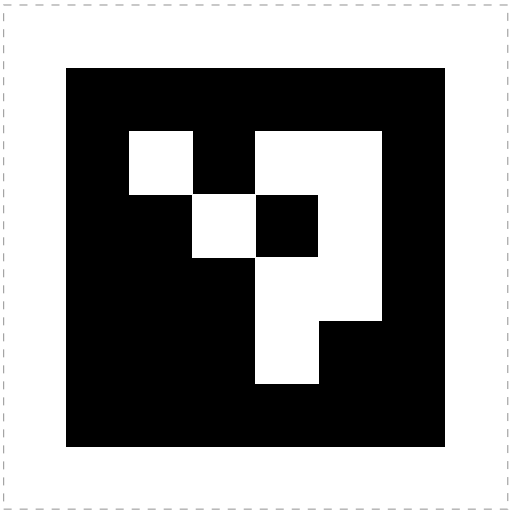
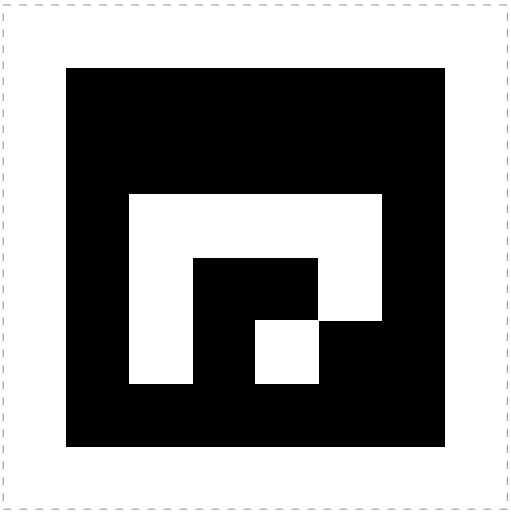
GRASPion calibration: reference markers (DICT_4X4_50, 50 mm)

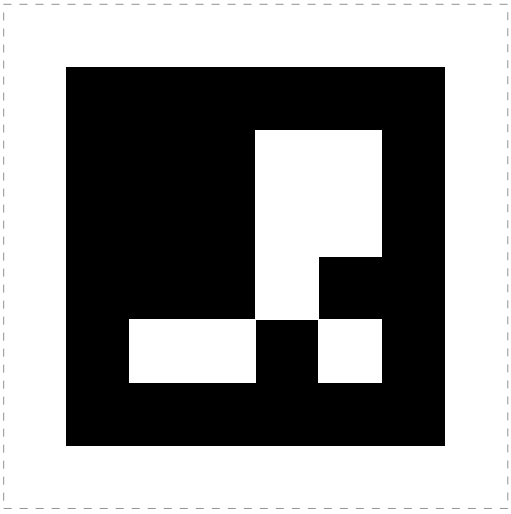
Print at 100 % / Actual size. A few % of printer scaling does no harm: the tracker uses the centres you survey, and the printed size only feeds a 10 % sanity check (reference_size_m). Cut on the dashed line, keeping the white border. Glue each flat on a spacer, its face level with the bot-cap markers. Put it in the corner named below, as the camera sees the arena, then measure its centre into reference_markers. Rotation does not matter.



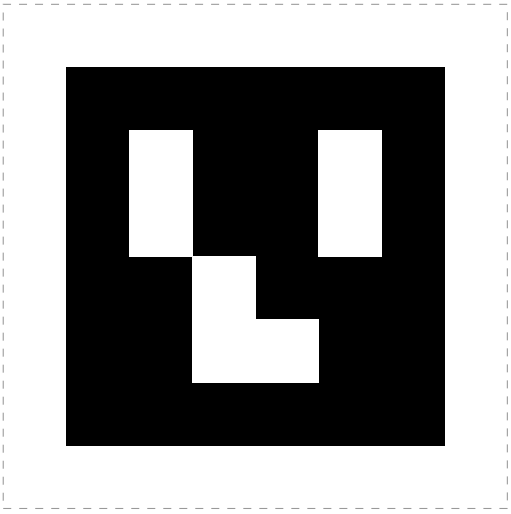
ID 0 bottom-left corner



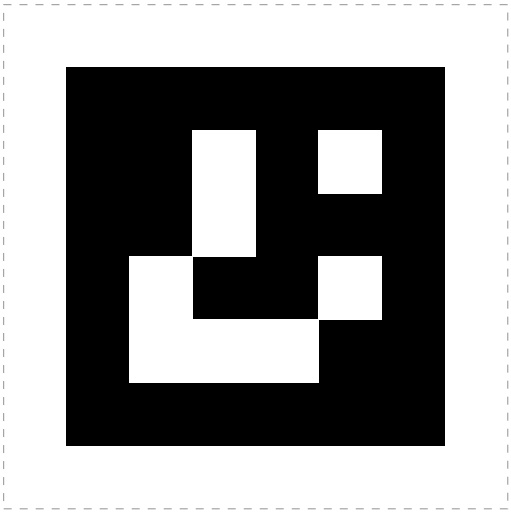
ID 1 bottom-right corner



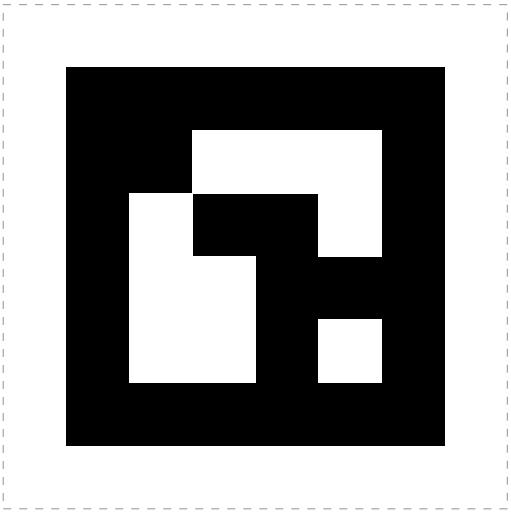
ID 2 top-right corner



ID 3 top-left corner



ID 4 optional extra: along an edge, survey it too



ID 5 optional extra: along an edge, survey it too
